EDUCATION

Vardhaman College of Engineering

Bachelor of Technology in Computer Science and Engineering (Data Science)

Aug 2023 - Present

CGPA: 9.46/10

EXPERIENCE

Deloitte

AI Intern

June 2026 - Present

Hyderabad, Telangana

- Engineered an LLM-driven browser-automation platform using Python, asyncio, Playwright/CDP, and browser-use to automate background verification (BGV) across 7+ third-party HR portals, reducing turnaround time from ~1 hour to ~7 minutes (~8.6× faster) across 1,000+ verification runs.
- Scaled the platform for concurrent load by containerizing 5 services with Docker and orchestrating tasks through Celery + Redis across 20 concurrent workers; added Redis-backed Playwright slot management, worker recycling, and autoscaling to manage browser resources.
- Cut average per-run processing time by 25–50% (~400s to 200–300s) through concurrent processing, LLM-response caching, circuit breakers, HTTP connection pooling, retry tuning, and error-page detection.
- Built or modified 20+ REST APIs across verification and data-processing workflows, using PostgreSQL for job/result persistence and AWS S3 for candidate-document storage and retrieval.
- Developed a 13-layer ERP data-preparation and forensic-analytics pipeline (14 business modules, 163+ automated tests) that flags duplicate PAN/GSTIN records, duplicate payments, PO splitting, Benford's Law violations, and segregation-of-duties (SoD) conflicts across 120K+ rows using vectorized processing.

PROJECTS

RetinaVision-AI | *Python, TensorFlow, OpenCV, Streamlit* | **GitHub**

May 2026

- Built a multi-disease retinal classifier for 6 eye diseases on 20,000+ fundus images, combining preprocessing, augmentation, Vision Transformers, and binary CNNs to reach 93.7% accuracy.
- Applied knowledge distillation to compress the ensemble into a lightweight CNN, retaining 82.7% accuracy while reducing inference latency by ~60% for efficient edge deployment.

EcoBot | *Python, YOLOv8, PyTorch, OpenCV* | **GitHub**

Mar 2025

- Built a real-time underwater plastic-waste detector on YOLOv8 using 4,000+ annotated marine frames, with augmentation and low-visibility training for robustness in murky water.
- Raised YOLOv8n mAP@0.5 from 68% to 85% (+17 pts) via COCO-pretrained transfer learning, staged fine-tuning, and hyperparameter tuning; reached 88% precision on validation data.

TECHNICAL SKILLS

Languages: Python, SQL, Java, JavaScript

ML/AI: Scikit-learn, TensorFlow, PyTorch, Keras, LangChain, LangGraph, LLMs, RAG, Agentic AI

Data & Databases: NumPy, Pandas, PostgreSQL, MySQL, Redis

Backend/Frontend: FastAPI, Django, Flask, React, REST APIs, Celery

Cloud & DevOps: AWS (S3, EC2, IAM), Docker, Git/GitHub, Postman

Automation: Playwright, browser-use, Docling, vLLM, OCR

Core Areas: Machine Learning, Deep Learning, Data Analysis

ACHIEVEMENTS

ACM-ICPC Asia Amritapuri Regionals – Qualified for the regional round

Jan 2026

Research Publication – Paper accepted at **IEEE GCON 2026:**

Underwater Plastic Waste Detection Using Deep Learning Techniques

Mar 2026

Amazon ML Summer School 2025 – Selected among the top 5% of 60,000+ applicants nationwide

Aug 2025

LeetCode – 380+ problems solved; 1900 rating (Top 5%, Knight badge)

Winner – DataHack Hackathon, Dept. of CSE (Data Science), Vardhaman College of Engineering

Mar 2025

CERTIFICATIONS

Machine Learning Specialization – Stanford Online (Coursera)

Jan 2025

Data Analysis with Python – IBM (Coursera)

Feb 2025
